International application No. PCT/DE 99/03191

ISSN: 1051-8215.

The present invention relates to a method (Claim 1) and a device (Claim 20) for processing a digital image with image points containing coding information.

Prior art:

As per document D1, a texture mapping is used to compress 3D colour images. To this end, a high-resolution model is formed from triangular meshes and transformed into a compressed model. The document indicates a method for transforming the texture mapping quickly and efficiently.

Document D2 describes a method and a system for coding an image sequence using triangular meshes and a tree structure. It subdivides the actual mapping into a network of blocks with nodal points located on points of high gradient. The blocks are then subdivided into two triangles.

Document D3 shows an image transmission system in which the image objects are transmitted separately from the background. The image objects are coded with a 3D method and recombined with the background in the receiver.

Document D4 shows the object-based DCT coding method used in MPEG-4.

Document D5 compares two- and three dimensional object-based methods for compressing image data.

None of the search report citations from the prior art shows a method or a device for processing a digital image

International application No. PCT/DE 99/03191

as per Claims 1 and 20 respectively.

Furthermore, the claimed invention is considered industrially applicable, since the claimed method and device can be used for coding image data.

The requirements of PCT Article 33 are therefore met.

International application No.
PCT/DE 99/03191

VII. Certain defects in the international application

The following defects in the form or contents of the international application have been noted:

The description does not cite the relevant prior art disclosed in D1-D3 (PCT Rule 5.1(a)(ii)).

The features of the claims have not been provided with reference signs placed between parentheses (PCT Rule 6.2(b)).

| Novelty (N) | Claims | 1-5 | YES |
| | Claims | | NO |
| Inventive step (IS) | Claims | 1-5 | YES |
| | Claims | | NO |
| Industrial applicability (IA) | Claims | 1-5 | YES |
| | Claims | | NO |

- 2. Citations and explanations
 - 1. This report cites the following reference documents:

D1: US-A-5 142 538 (STEWART BERNARD E. ET AL.),

25 August 1992 (1992-08-25)

D2: WO-A-97/41700 (MEISNER CHRISTOPHER; BORGGREEN

THOMAS (DK); MAXON SYSTEMS INC. LOND),

6 November 1997. (1997-11-06).

Since the claimed subject matter cannot be explicitly found in any of the citations, the invention should be considered novel (PCT Article 33(2)).

Moreover, the invention is industrially applicable, since it can be used industrially (PCT Article 33(4)).

3. Claim 1 concerns a method for controlling data transmission in a cordless V.24 data transmission system operated for data telecommunication between a data terminal and a data transmission device.

The V.24 interface supports modem operation with a PC. When the interface comprises 9 links, a

Atemational application No.
PCT/DE 99/02417

"hardware handshake" is performed. However, if the interface comprises only 7 links, a "software handshake" is performed.

The invention addresses the problem of controlling transmission of the states "RTS", "CTS" in a cordless V.24 data transmission system operated for data telecommunication between a data terminal and a data transmission device in such a way that reliable mutual communication of the state in the cordless V.24 data transmission system is ensured in a simple way in the case of both state transmission types.

This very specific problem cannot be found in any of the known documents. The prior art therefore neither discloses nor suggests the claimed solution, which is also very specific (see features a-e of Claim 1). Consequently, a person skilled in the art would not have arrived at the claimed subject matter without being inventive. Independent Claim 1 therefore meets the requirement of PCT Article 33(3).

Claim 1 therefore meets all the requirements of PCT Article 33(1).

3. Dependent Claims 2-5 concern advantageous embodiments of the independent claim and therefore also meet the requirements of PCT Article 33(1).

VII. Certain defects in the international application

The following defects in the form or contents of the international application have been noted:

D1 (see the abstract and Figure 1) describes a method for controlling data transmission in a cordless V.24 data transmission system operated for data telecommunication between a data terminal and a data transmission device.

Consequently, the two-part form defined by PCT Rule 6.3(b) appears to be appropriate for Claim 1 in the present case.

Moreover, the description should cite D1 (PCT Rule 5.1(a)(ii)).
